PROFESSIONAL SUMMARY

Senior Software Developer and Team Lead with a proven track record of leading teams, managing codebases, and delivering high-quality solutions to multiple clients on schedule. Specialized in NodeJS, NextJS, and Azure Functions, with expertise in REST APIs, GraphQL, and architecting scalable, multi-client systems. Skilled in mentoring teams, optimizing performance, and collaborating with management to drive efficiency, meet deadlines, and maintain exceptional quality standards.

SKILLS

Language	JavaScript, Java, and TypeScript
Frameworks and Databases	NextJS, ReactJS, NodeJS, ExpressJS, Azure Functions, Cosmos DB, MongoDB
DevOps and Tools	Jenkins (CI/CD), Azure DevOps, Postman, VS Code, Cursor
Testing and Other Tech	Jest, HTML, CSS, Redux, GraphQL, Azure Storage, Queue, Event Grid

EXPERIENCE

Senior Software Developer Cogitate Technology Solutions	July 2021 - Present <i>Navi Mumbai, MH</i>
---	---

- Led a team of 10+ developers, overseeing code reviews, 100+ PR merges, and deployments using Jenkins and Azure. Mentored teammates, collaborated with QA for seamless delivery, and aligned with management on timelines and expectations. Successfully delivered multiple high-quality client projects on schedule, earning recognition from both the organization and clients.
- Integrated local and social SSO, minimizing login overhead and enhancing user experience. Implemented payment gateways and third-party APIs using Azure API Management for enhanced security, request tracking, fault tolerance, and automated logging. Enhanced system reliability by improving debugging efficiency and reducing downtime by 50%.
- Developed a scalable e-signature solution using Dropbox Sign, enabling faster insurance binding by 2x, reducing manual intervention and agent workload. Enhanced quote-to-bind ratio, driving higher efficiency and profitability.
- Implemented an event-driven architecture using Azure Event Grid and Event Triggered Functions to handle asynchronous requests from multiple clients and functions simultaneously. Replaced batch processing, eliminating multiple handlers, cutting server costs, and achieving a 30x performance boost.
- Designed a reusable Azure Queue Trigger Function for multi-client document generation, replacing the cumbersome insurance policy document creation process. Achieved a 5x reduction in processing time and 20x increase in parallel handling capacity. Integrated retry mechanisms and error notifications, ensuring reliability and seamless automation.
- Developed a scalable backend framework using NodeJS, Azure Serverless Functions, and Cosmos DB, driving a 500% user base growth and single-digit response times. Optimized frontend architecture with ReactJS and NextJS, enhancing user experience by 70%. Implemented GraphQL APIs for high-performance data fetching and introduced a JSON-based configurable UI, shortening product delivery cycles from 16-20 weeks to just 8 weeks.

EDUCATION

Bachelor of Technology , Indraprastha University, Delhi	2018 - 2021
Computer Science and Engineering	7.95 GPA
Relevant Coursework: Object Oriented Programming, Databases, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Advanced Data Structures and Algorithms, Compiler Design	

PROJECTS

DIEP2 Architecture (@Cogitate - NextJS, NodeJS, Azure Services, REST APIs)

- Redesigned the existing .NET architecture, enabling 1000x higher concurrent user capacity with enhanced performance and tracking over the previous system.
- Developed a JSON-based dynamic UI framework, ensuring consistent and standardized UI across products. Reduced development time, minimized issues, and accelerated time-to-market.
- Designed a unified backend architecture for multi-client reusability, ensuring consistent business logic across implementations. Leveraged GraphQL for optimized API performance and implemented caching to improve response efficiency.

AI Image Generator (Self - MERN)

[\(Checkout\)](#)

- Integrated OpenAI for text-to-image generation, enabling image creation, sharing, and downloads. Developed a mobile-friendly user interface using ReactJS and Tailwind CSS and deployed on GitHub Pages.
- Built a scalable backend using NodeJS and ExpressJS. We used MongoDB for storing data and Cloudinary for storing the generated images. Hosted the backend on the Render platform.

React E-Commerce Site (Self - MERN)

[\(Checkout\)](#)

- Developed a ReactJS-based E-Commerce app integrating a product REST API to display electronic gadgets. Implemented product listing, filtering, cart functionality, and payment gateway integration for a seamless shopping experience.
- Created RESTful product APIs using NodeJS and ExpressJS, with MongoDB for data storage and Cloudinary for image management. Deployed the backend on Azure Serverless Functions for scalability and efficiency.

RECOGNITION AND EXTRA CURRICULAR

- Achieved a CodeChef highest rating of 1607 and solved 200+ DSA problems.
- Awarded Rockstar Award for exceptional performance, exceptional dedication and hard work (Mar 2022).
- Won Call of Code Hackathon organized by Cogitate among 10 teams in Cogitate, where we built a fully functional solution within 24 hours.
